iOmniscient offers Free Remote Design Service

Consultants, Resellers and End Users sometimes have difficulty designing video analysis systems. These systems often require very specific types of cameras and they need them to be placed in specific ways to allow the system to work effectively. For instance a human may detect an event even if a small part of a person is visible. For automated systems, usually the whole person needs to be visible. Users do not have experience with the types of issues facing video analysis systems. To assist them iOmniscient is offering a Free Remote Design Service, where customers with large and complex video analysis requirements can take advantage of iOmniscient's extensive experience to design their Video Analysis environment. This service is useful for budgeting and sizing storage and networking requirements, as well as providing guidelines for specifications, sizing and placement of cameras, encoders and computer equipment.

Meet us during:

Enlightenment Seminars at:

Kuala Lumpur - 15 January 2010

Dubai 18th January 2010

Singapore - January TBA

San Diego - March TBA

San Jose - March TBA

Beijing - March 29 2010

Shanghai - March 31 2010

Shenzhen - April 2 2010

iOmniscient Wins Engineering Excellence Awards 2009

iOmniscient has won the Engineering Excellence Award for 2009 presented by Engineers Australia, Sydney Division in recognition of excellent engineering by a small company.

The award was presented for iOmniscient's newest Video Analytics innovation; IQ-HAWK. The technology combines iOmniscient's Detection and Identification capabilities within a single camera.

"The Engineering Excellence Awards recognise the expertise of individuals and engineering organisations. They help achieve the goal of raising the professional standing of engineers by generating a greater public awareness of who engineers are and what they do" said Scott Wright, Chairman of the Engineering Excellence Awards Committee 2009.

iOmniscient Wins Asia Pacific Global Security Challenge 2009

Last month iOmniscient also won the Asia Pacific Global Security Challenge (GSC). Dr Rustom Kanga, iOmniscient's CEO received the award from Prince Edward, HRH the Duke of York, in an Awards Ceremony in Singapore on the 1st of October.

Competing against technologies that ranged from cyber security to the detection of anthrax, iOmniscient again won the day with its IQ Hawk technology which combines its comprehensive Detection systems with Identification systems like Facial Recognition and License Plate Recognition helping users save between 120 and 200 times the cost of their storage and band width when using megapixel cameras.

iOmniscient announces partnership with ACTi

iOmniscient is pleased to announce a partnership with ACTi. The two technology leaders collaborated to integrate iOmniscient's extensive range of Video analytics technology with ACTi's IP surveillance technology. This partnership aims to provide consumers with innovative and comprehensive end to end solutions for its consumers.

"ACTi is very excited to work with iOmniscient and to provide a complete surveillance solution with video intelligence for its customers," said Frank Li, ACTi's Solution Development Director. "iOmniscient is a well-known video intelligence company and through this new integration of ACTi's full mega-pixel product line and iOmniscient's video intelligence solution, customers can enjoy the best video performance with intelligent video analysis. ACTi provides a complete product line including IP cameras and video servers to cover all segments ranging from entry-level to the high end of the security market. This new integration will greatly assist system integrators and distributors to provide superior solutions to their clients and win more business at better profit margins." iOmniscient and ACTi have successfully integrated IQ-Hawk, a world first convergent technology capable of Detection and Identification within one camera with ACTi's range of Megapixel Cameras which have built their reputation on providing clearer and better picture quality at an affordable cost.

"Automated Surveillance" Launch in Dubai

"Automated Surveillance" will be launched in Dubai in the next month. The book will be launched during iOmniscient's "Enlightenment Seminar". Each participant in the seminar will receive a free CD copy of the book. These seminars have already been run in many locations. Over the next six months we expect the seminar to be run in several cities in North America and Europe.

iOmniscient along with Intel, Sun, Analytics Ready and several other companies, have launched the first comprehensive book on the subject titled "Automated surveillance – A Guide to Intelligent Video Analysis". The book was first launched at the IFSEC exhibition in the UK in May 2009 in hard cover and CD form and the first consignment was completely sold out. Today, the books are available from iOmniscient and from the various companies that constituted the Publishing Consortium and also from Amazon.com. Please contact info@iomniscient.com for more information on "Automated Surveillance" or invites to iOmniscient's "Enlightenment Seminar".
