iOmniscient nominated for a number of Awards

Once again iOmniscient has been nominated for a number of Awards at the forthcoming IFSEC exhibition. In the CCTV category its Facial Recognition in a Crowd product has been nominated while in the Integrated Product of the Year, iOmniscient’s IQ Airports – a complete portfolio or solutions for Airports has positioned the company in the finals.

And in a second competition called the Future of Security our IQ Hawk product (that can integrate detection based video analysis with facial recognition and license plate recognition) has been nominated.

iOmniscient will be exhibiting at IFSEC. Come see us in Hall 4 Booth H:10 for our live Facial Recognition in a Crowd demonstration. We will also be joined by two of our partners AnalyticsReady and Tandberg Data.

Email us at info@iomniscient.com to set up an appointment if you are going to be there.

Video Analytics is a young technology – hardly ten years old. Not all our customers, consultants and systems integrators understand it well. Nor have they had extensive experience with it.

For this reason iOmniscient has offered Professional Services to ensure that customers have successful implementations. Without a knowledge of the technology it’s very much like someone trying to fly a plane without any training or experience. Your chances of a safe landing would be very small.

The services offered cover all the expertise that customer would require. Starting with Risk Analysis an iOmniscient consultant can assist the customer in deciding which situations constitute the most risk and what risk mitigation technologies are most useful. We would also advise them on what software if any can be used for addressing different risks.

Next we can help the customer design his environment, from the network that is required down to the storage and the selection and placement of the most appropriate cameras. As iOmniscient is not a manufacturer of hardware it is in a unique position to advise on what hardware would work best with its software in different situations.

Finally iOmniscient consultants can assist in the implementation of the system and the configuration of the software.

Services can be provided on a Fixed Price or Time and Materials basis and can be delivered on site or remotely.

Normally iOmniscient would not be the Prime Contractor on a project. Our Systems Integrator partners are much more adept at that. But we help them in delivering a successful project by providing the knowledge we bring on video analytics.

Knowledge is the key to successful video analytics implementations and iOmniscient is keen to impart the experience that it has to help its customers succeed.

CISCO integrated with iOmniscient

iOmniscient’s products are now integrated with CISCO’s VMS system and together they offer a formidable combination of capabilities in the security environment. In the recent past this integrated suite was showcased in the USA and in Australia and in May this will be exhibited in Paris and Frankfurt.

Interview with Ivy Li, Co-founder and MD of iOmniscient

Ivy was interviewed by iOmniscient News just after her participation in the IMS Conference in Los Angeles.

Click here to see the transcript of the interview in which she comments on the conference itself and on many of the ideas that emanated from there.
